# Description

Working in the field of ophthalmology for over three years and different locations, I noticed that there was an issue with training. I created Work Flow to improve with the learning curve. Work Flow is meant to help on board Medical Students, Ophthalmic Technicians, and Ophthalmology Residents for efficiently.

# Features

- Login Security
- Create Users
- Create/Delete Doctor Work Flows
- Create/Delete Test Work Flows

# Planning - User Stories

Highlight some of your projects' User Stories. Focus on explaining what this project can do from the user's perspective.

Work Flow was created to help the user be more independent when working in the field of Ophthalmology.

# Planning - Database

When planning my database I needed to create a doctor and a test table that was relatable. I needed them to be relatable due to certain test being attached to certain doctors.

# Technology Stack

- Java, Javascript, CSS, HTML
- Thymeleaf
- Thymeleaf Template Engine
- MAMMP, MySQL
- SASS

# Demo

# What I Learned

- I learned how to use SASS for the CSS build.
- I learned about incorporating Security Features
- I also learned about how to add users
- I learned how to merge two projects using git.

# What's Next

- I will be adding a Calendar
- I will also be incorporating a upload image feature
- Lastly, I will be adding a view to see all of the users
- I will be relearning python and improving my web development skills.
